

ECW

ENCODER PRODUCTION UTILITY

Automatic calibration and test of signal-conditioning ICs in encoder production

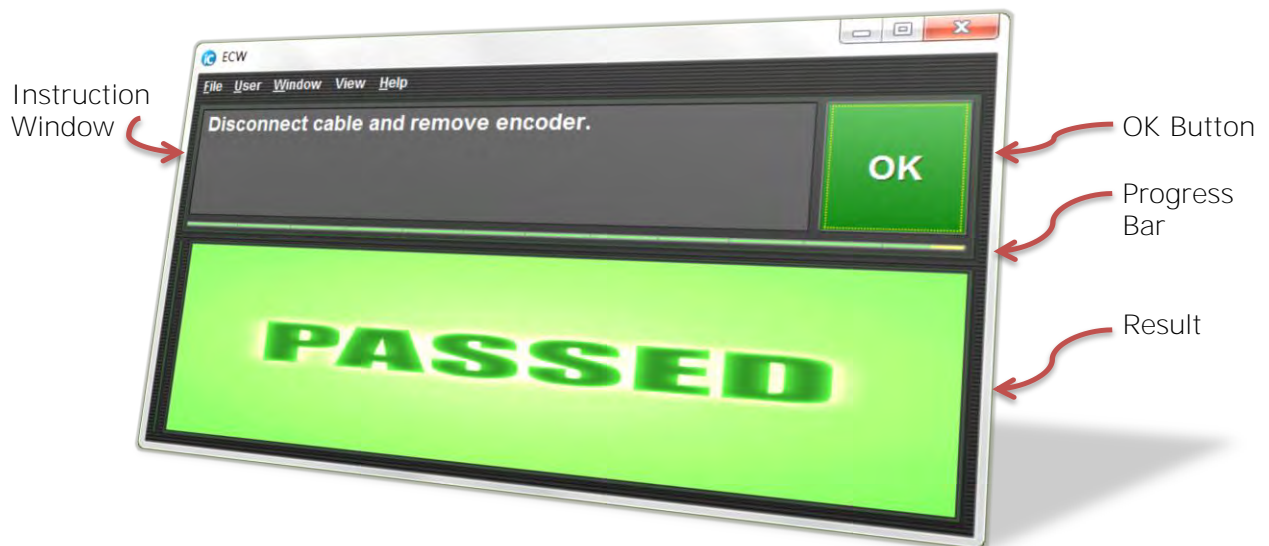

Typical System Setup

Using Engineering GUIs in Production?

ECW Offers a Simple Workflow by Instructions

Principle of Operation

- Instructs the user to operate switches and drive
- Starts with a default configuration
- Remote-controlled signal analysis by SinCosYzer
- Computes best settings and programs the **encoder's EEPROM**
- Encoder test with specified limits and classification (passed, failed)
- Database support, statistical analysis and user management included

Engineering Configuration

Features

- Software solution using a remote-controlled SinCosYzer for signal measurements
- Automatic encoder chip parameter adjustment
- Support for iC-MNF, iC-MN, iC-MH, iC-MSB, iC-MSA, iC-MQ
- Continuous testing against specified limits
- Passed / failed classification
- Built for use in production environments
- User guidance through the entire procedure
- Freely configurable user interface
- User account management
- MySQL database for all measurement results and configuration history
- Statistical evaluations
- Graphical signal analysis tools
- Limit and configuration editor
- Automatic or manual DUT switch and drive controlling
- Network interface for status and remote control
